

Integral Firing Device (IFD-II)

The Integral Firing Device (IFD-II) is an all-in-one, one-time use shock tube firing system with a delayed detonator. The IFD-II is a single IFD device with the addition of:

- Plastic connector clip to quickly connect into the main charge
- Visual and physical features for delay identification
- Quick and simple set-up minimizing time on target
- Compact design for ease of transport and quick access

Like the IFD, the IFD II is interchangeable with military initiation assemblies and is capable of initiating standard breaching charges.

APPLICATION:

Hard Case

The IFD-II provides a durable, self-contained firing assembly for tactical breaching applications.

KEY FEATURES:

- Color coded "trap-door" provides easy visual to identify delay
- Tactical "bumps" provide alternative delay identification
- Range of delays available for specific mission requirements
- Delays can be used for standoff position
- · Short shock tube length and built-in connector allow for "drop and go" deployment
- Fits in pocket for a M4 Carbine/M16 thirty round magazine

PROPERTIES:

- · Plastic case with removable cap that protects the system from the environment, abuse and hazards
- Military strength detonator
- 2 mm (0.085") "Minitube"
- Integrated firing assembly containing detonator, shock tube, primer and initiation method
- Sturdy and compact design
- Dual safety pins

OPERATIONAL STEPS:

- 1. Pull out detonator and the connected clip. Shock tube is exposed with the attached detonator.
- 2. Connect detonator to the explosive charge with the connected clip.
- 3. Return to safe position.
- 4. Remove safety pins.
- 5. Initiate by fully rotating firing lever back and releasing.
